

MC10

Motorgear for sliding gates up to 1200kg

Magnetic or mechanical limit switch

Safety key for the unlock

Sturdiness and Reliability

Electro-mechanic Gear-Motor designed to automate sliding gates and doors till 1200 Kg. The carter is completely in varnished aluminum, the motor and gears are immersed in oil.

Power regulation and evolved double disk clutch allows a fast stop of the leaf. It is provided also by a thermal sonde for motor blocking in case of overheating .

Release system by comfortable, reliable and protected lever is accessible by a personalized key.

The Motor is furnished with a bracket for the fixing to the floor.

MC10

Main Characteristics

- Carter completely in varnished aluminium
- Double Disk Clutch
- Motor immersed in oil
- Thermal protection of motor
- Release Lever of comfortable usage
- Safety key for the release
- Compact dimensions (L230 x H310 x P160 mm)
- Optional control board (MC10/C - D)

Versions

MC10 FCM	Motor Gear with mechanical limit switch
MC10 MGM	Motor Gear with magnetical limit switch
MC10 C	Motor Gear with mechanical limit switch, integrated control board B601-P
MC10 D	Motor Gear with magnetical limit switch, integrated control board B601-P

Technical Characteristics

Feed	230Vac 50-60Hz
Absorbed current	3,5A
Motor power	650W
Gate maximum weight	1200Kg
Drag Speed	9m/min
Pinion step	Modulo 4
Power regulation device	Double disk
Duty cycle	Intensive
Oil type	ISO 100
Functioning temperature	-20 +70 °C
